

Package ‘UnitTesting’

November 11, 2020

Title What the Package Does (One Line, Title Case)

Version 0.0.0.9000

Description What the package does (one paragraph).

License file LICENSE

Encoding UTF-8

LazyData true

Roxygen list(markdown = TRUE)

RoxygenNote 7.1.1

Suggests testthat,
roxygen2,
rmarkdown

Imports magrittr,
dplyr,
forcats

Depends R (>= 4.0),
caret,
e1071

R topics documented:

| | |
|-------------------------------|---|
| as_factor_dataframe | 1 |
| model_results_df | 2 |

| | |
|--------------|----------|
| Index | 3 |
|--------------|----------|

| | |
|---------------------|----------------------------|
| as_factor_dataframe | <i>as_factor_dataframe</i> |
|---------------------|----------------------------|

Description

Converts columns in a dataframe to factors

Usage

```
as_factor_dataframe(df = NULL, columns = NULL)
```

Arguments

| | |
|---------|--|
| df | A dataframe to perform the operation on |
| columns | The columns you wish to convert to factors |

See Also

Other tutorial: [model_results_df](#)

Examples

```
as_factor_dataframe(model_results_df, c('pred', 'actual'))
```

| | |
|------------------|-------------------------|
| model_results_df | <i>model_results_df</i> |
|------------------|-------------------------|

Description

A toy dataset of model results

Usage

```
model_results_df
```

Format

An object of class `tbl_df` (inherits from `tbl`, `data.frame`) with 100 rows and 2 columns.
